

With the continued growth of diagnostic procedures being undertaken in healthcare facilities, the need for time-efficient reporting on diagnostic images has become crucial.

REDtone MEX, which provides a reporting service, is well positioned to assist with PACS planning and introduction, hospital or group integration, networking, and telemedicine advisory services.

REDtone MEX offers Teleradiology Reporting to cover out-of-hours or festive periods and the shortage of radiologists, clear backlog of reports, as well as increase efficiency and savings on expenses.

Teleradiology services include:

- A senior radiologist team, available 24/7
- Efficient and professional reporting
- Quality assurance monitoring
- Significant service KPIs
- Real-time lossless image transfer
- Second opinion service
- Specific focus on quality, efficiency, ease of use, professional experience and assisting on infrastructure redesign
- Opportunity to discuss the economic advantages of teleradiology services for individual units, or groups of hospitals, medical centres or clinics

**Teleradiology Reporting Services**  
**For Quality Healthcare**

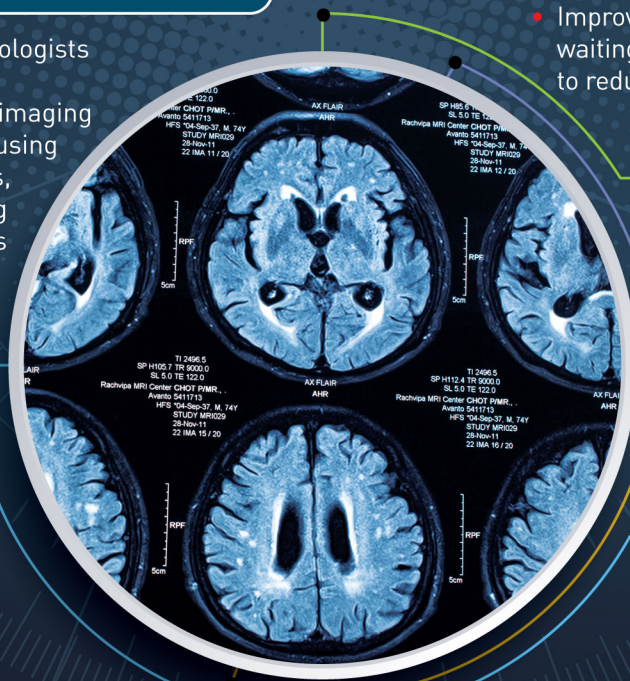

## Why Teleradiology?

With the continued growth of healthcare facilities, greater demand for diagnostic services and increasing difficulty in hiring professionals to meet a greater volume of work, Teleradiology, which has developed very successfully in many countries, provides several solutions to overcome today's challenges in providing high quality radiology services.

REDtone MEX, with its unique software platform, can move radiology images in real-time, losslessly, to radiologists (or specialists) at specific locations. This enables the reporting on images to occur with speed, efficiency and considerable cost savings to the client, as well as speedier clinical management.

### Challenges Facing Healthcare Delivery

- Shortage of radiologists
- Work volume in imaging departments causing service backlogs, extended waiting times and delays in reporting of films

## Advantages Of Teleradiology

- Provides round-the-clock radiology reporting
- Reporting coverage during out-of-hours period, weekends and festive holidays
- Charges on reports only
- Reduces backlog reporting
- Helps avoid the costly hiring of locum radiologists
- Facilitates timely reports with tight KPIs to enable clients or specialists to start the clinical management of cases quicker
- Provides second opinion services (when called for)
- Improves imaging department workflow for shorter waiting times and speedy report availability, as well as to reduce pressure on department radiologists

## Economic Considerations

- The cost of a locum radiologist versus charge per report only
- Economic considerations for hospital groups in centralising reporting services
- Offloading low intensity reporting to allow in-house radiologists to focus more time on hands-on modalities such as interventional procedures, ultrasound and complex scanning
- Greater efficiency in imaging department workflow will lead to more satisfied clients, shorter waiting times, fewer complaints and ultimately, retaining clients for future services
- Faster reporting for specialists allows for quicker clinical management, leading to higher quality healthcare service delivery
- Second opinion service allows specialists to have access to extended knowledge and capabilities for treating complex cases, thereby raising the professional profile of the hospital or medical centre in the eyes of the community

## How To Proceed

Please contact our office as listed below:

- Our Teleradiology Representative will discuss with you your requirements
- Our Teleradiology Technical Advisor will assess your technology requirements
- A proposal that takes account of your unique requirements will be offered to you
- A contract will be prepared for signing
- Our technical advisor will oversee the on-site setup
- Service commences
