Better Than Owning IT

The Next Generation Business-To-Business Cloud

REDtone *flexi*Cloud offers comprehensive, scalable, flexible and cost-effective solutions that help businesses align their IT infrastructure with the overall business strategy. Whether it is managing enterprise applications and computing platforms or securing networks, there is a *flexi*Cloud solution to match your business needs.

We strive to maintain the highest level of information security through industry best practises in line with ISO 27001, and ISO 20000 for IT service management by ensuring processes related to service delivery are ITIL compliant.

Our Offerings

1. *flexi*Compute

- Enables enterprise users, managed solutions providers (MSP), IT integrators and software developers (ISV) to build, manage and control computing resources in a robust private cloud computing infrastructure
- Easily deploy networks using virtualised network resources; allocate virtual resources such as VLANs and IP addresses
- Virtual Private Cloud (VPC)

2. *flexi*Backup

- Provides seamless and efficient backup and restoration of data and information from most mainstream operating systems, databases and applications
- Uses agents to interface with file systems and applications to facilitate the transfer of data to a protected environment
- Secures data through encryption, granular and customisable access controls for content and operations, role-based security, single sign-on, alerting and audit trails to keep information secure

3. *flexi*DR

- Flexible, cost-effective approach to disaster recovery based on the requirements of the enterprise
- Allows customers to maintain IT resilience without the need to purchase and maintain a replica of their production environment
- Complete end-to-end managed disaster recovery service that includes IT service continuity management consultancy as well as business continuity implementation and operations

4. *flexi*PaaS

- Offered across operating systems and databases
- Addresses complexities involved in setting up the necessary software development environment
- Data management platform for aggregating data, processing and analytics needs

5. *flexi*SaaS

- Cloud-based delivery is the future; with SaaS, you can now focus on your core business operations
- Benefit from immediate scalability and improved performance with more consistent service and guaranteed uptime
- Focuses on delivering domain-based B2B services that combine industry-specific applications, infrastructure and support services
