

# REDtoneMETRO-E

## REDtone Metro Ethernet

REDtone presents your business with the advantages of a Carrier Class Ethernet to meet your growing network requirements.

As a strategic investment, REDtone Metro Ethernet is proven to provide cost-effective, reliable, scalable, and seamless connectivity solutions that will meet your ever-growing business demands.

We will continue optimising your existing infrastructure as your bandwidth requirement grows; without the need to update or change your current network's interface.

## Features

### Solution Consultation

We provide consultancy services to all our customers to ensure that the best solutions are employed to meet their needs.

### Nationwide Coverage

REDtone engages over 70 Ethernet nodes nationwide to accommodate the ever-expanding requirements of our customers.

### 24 x 7 Professional Support Team

Supported by a professionally trained and fully-equipped team of skilled networking engineers, we provide our customers with a comprehensive 24-hour, 7-day Network Control Centre (NOC).

## Benefits

- 1. High Bandwidth Capacity:** You will be subscribing to a high bandwidth capacity with speeds ranging from 30Mbps all the way to 1Gbps.
- 2. Network Flexibility:** Expand your network with minimal impact on your existing circuits by utilising the functionality of a scalable Wholesale Ethernet Virtual LAN (VLAN).
- 3. Plug & Play:** Operations is as simple as plugging in your Ethernet LAN cable into the port. Once the switch is in place, get immediate connectivity for configured destinations.
- 4. Cost-Effective:** There will be no additional capital expenditure on top of our service. You will be able to use your existing LAN equipment with our Wholesale Ethernet services.
- 5. Flexibility:** REDtone allows for incremental bandwidth usage, which means you only need to purchase bandwidth as and when you need it. Our Single UNI is also capable of supporting multiple services.
- 6. Future-Proof Technology:** REDtone Metro Ethernet is a future-proof investment which will not go out-of-date as it is a true converged network; carrying all types of traffic including voice, video and data.

## REDtone Metro Ethernet Network Topology

The service network operates across our very own 10Gbps Ethernet metropolitan area network via fiber-optic connectivity. Our customers will be able to have their sites connected to the same metro area or within different metro areas, depending on their requirements or site locations. Our customers' networking equipment will be connected to the User Provider Edge (UPE) located at their own premises.
